Reg No. :-25BSA10050

Branch :- B.Tech CSE (Cloud Computing & Automation)

Year :- 1st Year

This project focuses on developing essential digital literacy skills required in today's academic environment. It includes learning about digital tools, online platforms, communication methods, and cyber safety practices.

Through this project, I explored platforms such as GitHub, LinkedIn, and HackerRank, and understood how they are used for learning and professional growth. I also learned the importance of maintaining a responsible online presence and following proper communication etiquette.

Overall, this project helped me understand that digital literacy is not just about using technology, but also about using it safely, effectively, and responsibly.

In Task 1, I created a digital literacy infographic using Canva. The infographic included important topics such as what digital literacy is, useful digital tools for students, safe internet practices, and professional online presence. I used simple bullet points and icons to make the content visually appealing and easy to understand.

While creating the infographic, I focused on keeping the design clean and well-structured so that the information could be quickly understood. I found it interesting to present information visually rather than in long paragraphs. The main challenge I faced was selecting only the most relevant points without overcrowding the design.

This task helped me understand the importance of visual communication and how it can be used to spread awareness effectively. It also improved my creativity and ability to present information in a structured and engaging way.

In Task 2, I built my digital portfolio by creating accounts on platforms such as GitHub, LinkedIn, and Kaggle. GitHub is used to showcase projects and coding work, LinkedIn helps in building a professional network, and Kaggle provides a platform to explore technical skills and learning resources.

I added basic details such as my education, skills, and learning interests on these platforms. This task helped me understand the importance of creating a professional online identity. I realized that these platforms are not only useful for showcasing skills but also for connecting with professionals and exploring career opportunities.

In the future, I plan to regularly update these profiles by adding new projects, improving my skills, and staying active on these platforms. This will help me build a strong portfolio and prepare for internships and job opportunities.

In Task 3, I explored coding and collaboration platforms. I created an account on HackerRank and solved a beginner-level problem, which helped me understand basic problem-solving and coding concepts. It also gave me confidence to practice more coding problems in the future.

In addition, I created a Google Form to design a digital literacy awareness quiz. The form included multiple-choice and short-answer questions, which helped me understand how online tools can be used for data collection and surveys. I also learned how responses are recorded and analyzed using Google Sheets.

This task helped me understand the importance of digital platforms in learning and collaboration. It showed how technology can be used effectively for both individual practice and group activities in an academic environment.

In Task 4, I learned about professional communication and email etiquette. I wrote two formal emails, one for requesting an assignment extension and another for applying for an internship opportunity.

This task helped me understand that a professional email should include a clear subject line, proper greeting, well-structured content, and a polite closing. I also created a social media checklist that highlights responsible online behavior.

Through this task, I realized that proper communication is very important in professional environments. A well-written email can create a positive impression and improve opportunities.

In Task 5, I studied cybercrime and created a case study on cyberbullying. I learned how such crimes occur, who is commonly targeted, and the impact they can have on individuals.

I was surprised to see how common cyberbullying is and how it can affect a person's mental health and confidence. Many people are aware of such risks but still become victims due to lack of caution.

After this task, I will be more careful while using social media and avoid sharing personal information. I will also report any suspicious or harmful activity. This task helped me understand the importance of safe and responsible online behavior.

In conclusion, this project helped me develop a better understanding of digital literacy and its importance. I learned how to use different platforms, communicate professionally, and follow safe online practices. It also made me more aware of my digital behavior and how it can impact my future. I will apply these learnings in my academic and professional journey to become a responsible and skilled digital user.
